

New Product. For Immediate Release: April 29, 2010

Reedy 40C+ Competition LiPo Batteries

After extensive development and track testing, Reedy is proud to announce the release of all-new competition LiPo batteries for the summer racing season. Available in standard and saddle pack configurations, these 40C+ rated batteries deliver generous power and capacity for both on and off road applications.

Capacity and power are not the only great features of this battery. Compact dimensions allow for installation in most 1:10 scale vehicles with no modifications. A durable hard case, featuring locking tabs as well as adhesive so that the case halves do not separate, helps protect the battery from damage.

The standard version is equipped with convenient 4mm socket-style connections. A free charging harness that incorporates a balance connector for balance charging is included. The saddle packs version features low resistance 12-gauge wires with an integrated balancing harness. Both batteries are ROAR approved and EFRA listed. The #685 is also legal for IFMAR competition.

LiPo battery technology continues to progress and Reedy is proud to bring improved performance to the masses.
